Project Description: The Solid Waste Transfer Facility located at 1033 Elm Street is a location that allows residents and commercial businesses to dispose of construction, demolition, and many other types of waste based on a price per ton. The tipping floor where waste is dumped consists of three pit areas. One of the pit areas still has an old, antiquated push paddle which was designed to help move waste into the pit area and has been inoperable for years. In addition, over time some holes have formed in the barriers of the pit area. The City issued an Invitation to Bid for the repairs resulting in a contract that will provide encapsulation of the push pit paddle and repair to all open areas within the compactor area. This project will repair the compactor push pit and will be undertaken in coordination with the fire suppression system installation.

Schedule:
Bid Opening: September 2, 2020
Notice to Proceed:
Contract Completion Date:

Current Contract Price: $33,000

Engineering Department October 2020 Status: This construction contract was approved at the September 22nd City Council Meeting.
